

ELECTRIC PORTABLE REBAR BENDERS

Hoppt Electric Portable Rebar Bender are Ideal for builders, contractors and manufacturers who require a simple to use, consistently accurate rebar bending machine onsite or in the shop.

The Hoppt “RB” machines include rollers and collars of various sizes for use on different diameters of rebar and with preset angle locks for repeating the same angle bend. The two slide-type angle selectors can be set to accurately bend any angle from 0 - 180 degrees. Included are two foot-pedal controls for hands-free bending which eliminates injuries and worker fatigue caused by manual rebar bending.

Emergency stop and flush mounted star buttons are included for added safety. The motor runs quietly (low noise) and is only on while bending is in progress, preventing unnecessary wear & tear.

ELECTRIC PORTABLE REBAR CUTTERS

| Technical Data | |
|--------------------|---------------|
| DESCRIPTION | HRB-25 |
| Dimensions (LxWxH) | 450x500x440mm |
| Wattage | 1600W/1700W |
| Net weight | 91kg |
| Max.rebar | 25mm |
| Carton size | 500x555x505mm |
| Bending Angle | 0°-180° |
| Min.rebar | 6mm |
| Gross weight | 109kg |

ELECTRIC PORTABLE REBAR CUTTERS

| Technical Data | |
